

# CALORIE CALCULATOR

MINI PROJECT:

TEAM MEMBERS:

M.SRINATH

K.VAKIS KUMAR

B.YASHWANTH

# PROBLEM STATEMENT

- User Registration and Login
- Input of personal details (age, gender, height, weight)
- Selection of activity level
- Automatic calculation of Basal Metabolic Rate (BMR)
- Daily calorie requirement calculation

# METHODOLOGY

- **User Registration/Login:** Users create an account and log in to the system.
- **Enter Personal Details :**Users enter age, gender, height, weight, and activity level.
- **Calculate Calories:** The system calculates the user's daily calorie requirement using standard formulas.
- **Display Results:** The calculated daily calories are displayed along with suggestions for:
  - Weight Maintenance
  - Weight Loss
  - Weight Gain
- **Store Data :**User details and calculation history are saved in the database.

# OUTCOME

- The **Calorie Calculator using Django** successfully calculates the daily calorie requirements of users based on their age, gender, height, weight, and activity level. The system provides personalized calorie recommendations for maintaining, losing, or gaining weight. It offers a simple and user-friendly interface, stores user data securely, and helps users make informed decisions about their diet and fitness goals.

The screenshot displays a web application titled "Django Calculator App". It features a clean, minimalist design with a light blue background. The form includes three input fields: "First Number", "Second Number", and "Operation". The "Operation" field is a dropdown menu currently set to "Add". Below these fields is a prominent blue "Calculate" button. The result of the calculation is displayed in a grey box at the bottom, stating "The result is: 20.0". A small copyright notice "© 2026 sep anand sarav" is visible at the very bottom of the page.

# CONCLUSION

- The **Calorie Calculator using Django** is a useful web application that helps users determine their daily calorie needs quickly and accurately. By using personal information such as age, gender, height, weight, and activity level, the system provides personalized calorie recommendations. The application is easy to use, efficient, and supports users in maintaining a healthy lifestyle and achieving their fitness goals.
